To Whom It May Concern:

I have had the opportunity to work with Franz Stone of Aspen Digger for the past four years. He has been a part of many of our projects and we are continually impressed with the quality of his work and the professionalism of both him and his employees.

As a company, Aspen Digger is environmentally conscience and is always operating with new and extremely well maintained equipment. Franz and his team are always prompt with client communications and they have always showed up on time and when promised. Franz has always maintained efficient and effective work practices by hiring qualified operators. They do an excellent job of controlling dust migration and all of the projects they have done for us have run seamlessly.

There was one project in particular that we worked on together at Lewis Lake, in which Franz and his team were responsible for the excavation of a large barn, construction of an access road and the installation of all the utilities for the project. Like always, they worked hard to see the project through completion and they did so on time and on budget.

We enjoy working with Franz and the Aspen Digger team. They produce quality workmanship and we will undoubtedly continue to use them for our future projects. If I can be of any further assistance, please feel free to contact me at (970) 379-5823.

Best Regards,

Monty Thompson
